

Listing of the Claims:

Claims 1- 31: (Cancelled).

Claim 32: (Currently Amended) The ~~wireless~~-system according to claim 59, further comprising:

a connection from one of ~~the~~ an access point and ~~the~~ a server to the Internet.

Claim 33: (Currently Amended) The ~~wireless~~-system according to claim 59, wherein:

at least one object menu icon is provided on a screen of the at least one ~~wireless~~-terminal, ~~each~~ the at least one object name icon with having an associated object.

Claim 34: (Currently Amended) The ~~wireless~~-system according to claim 33, wherein:

the at least one object menu icon is associated with a plurality of objects which are visible at ~~the~~ a same time.

Claim 35: (Currently Amended) The ~~wireless~~-system according to claim 59, wherein:

the ~~wireless~~ at least one terminal utilizes a focus marker around fields on a screen.

Claims 36- 46: (Cancelled).

Claim 47: (Currently Amended) The ~~method~~ system according to claim 59, wherein:

the at least one terminal is wirelessly connected to ~~a~~ the communication network.

Claim 48: (Cancelled).

Claim 49: (Currently Amended) The ~~wireless~~-system according to claim 33, wherein:

the at least one object menu icon causes an audio feedback to be played in the at least one terminal when the at least one object menu icon is selected.

Claim 50: (Currently Amended) The ~~wireless~~-system according to claim 59, wherein:

the selection information is transferred from the at least one terminal to the server by applying a browser application between a terminal and server connection.

Claim 51: (Currently Amended) The ~~wireless-system~~ according to claim 59, wherein:
the selection information is processed into HTML format in the at least one terminal before being sent to the server.

Claims 52-55: (Cancelled).

Claim 56: (Currently Amended) The ~~communication-system~~ of claim 59, further comprising:
a service which is selectable from a service tab which is downloaded from a management server.

Claim 57: (Cancelled).

Claim 58: (Currently Amended) A ~~server-device-for-processing-responses~~, comprising:
a request handler control which receives user requested data;
a ~~service-server~~ control which creates a response template dependent upon a service to be provided to a terminal and information relative to a session connection between the terminal and the server ~~device-and user given information~~, the response template including instructions for converting the user requested data from a first language format to a second language format, wherein the second language format is selected based on one or more attributes of the terminal;
a page generator which ~~received~~ receives the response template from the server control and the user requested data, which are processed in the page generator according to a user profile; and
a HTML control which receives a processed page from the page generator and sends a response to the terminal ~~in a format of the processed page~~.

Claim 59: (Currently Amended) A ~~wireless-communication-system~~, comprising:
~~at least one wireless terminal;~~

~~an access point in wireless communication with the at least one terminal and forming part of a network;~~

a server connected to ~~the~~ a communication network, wherein the server receives selection information from at least one terminal connected to the communication network, the selection information corresponding to one or more selected objects;

~~the at least one wireless terminal includes a selector for selecting objects so that selection information is transferred from the at least one terminal to the server; and wherein~~

in response to receiving the selection information, ~~being transferred from the at least one terminal to the server~~, the server responds back to the at least one terminal with a page template containing localization and component parsing performed by the server before a response to the selection information is sent to the at least one terminal, wherein the page template includes instructions for converting requested data associated with the selection information from a first language format to a second language format, the second language format selected based on one or more attributes of the at least one terminal; and

localizing and parsing of the selection information is performed by the server according to a user profile stored by the server before responding back to the at least one terminal ~~is performed~~.

Claim 60: (Currently Amended) The ~~wireless~~ system of claim 59, wherein:

a selection of the page template is performed according to a size of a display of the at least one terminal and a capability of the at least one terminal to support a signalling protocol.

Claim 61: (Cancelled).

Claim 62: (New) A method comprising:

receiving, at a server, a selection of a service from a terminal;
identifying one or more attributes of the terminal;
identifying a template including instructions for converting data associated with the service selected by the terminal from a first language format to a second language format, wherein the second language format is selected based on the one or more attributes of the terminal;

converting the data associated with the selected service based on the template; and
transmitting a response including the converted data to the terminal.

Claim 63: (New) The method of claim 62, wherein the one or more attributes of the terminal includes a signaling support capability of the terminal.

Claim 64: (New) The method of claim 62, further comprising modifying the data associated with the selected service according to a user profile associated with the terminal.

Claim 65: (New) A computer readable medium storing computer readable instructions that, when executed, cause a processor to perform a method comprising:

receiving a selection of a service from a terminal;
identifying one or more attributes of the terminal;
identifying a template including instructions for converting data associated with the service selected by the terminal from a first language format to a second language format, wherein the second language format is selected based on the one or more attributes of the terminal;
converting the data associated with the selected service using the template; and
transmitting a response including the converted data to the terminal.

Claim 66: (New) The computer readable medium of claim 65, wherein the one or more attributes of the terminal includes a signaling support capability of the terminal.

Claim 67: (New) The computer readable medium of claim 65, further comprising modifying the data according to a user profile associated with the terminal.
